Strong-form residual loss vs. energy-norm quantities (small: single seeds, large: seed mean; hard BC omitted)
Poisson
Variable coefficient
L-shaped
residual norm $\|R\|_{*,a}$
true error $\|e\|_a$
$\|r\|_{L^2}$ (fixed uniform sample)
baseline
w_b=100
γ=10
γ=1
γ=0.1
γ=0.01
16 bnd
64 bnd
w_b=1
corner
corner-int
baseline, w_b sweep, fixed boundary pts
tangential penalty / hard BC
corner-refined collocation
